Open to remote work (UTC+5) and relocation

SUMMARY

Full-stack developer working professionally since 2023, mostly with React, Next.js, TypeScript and Node.js. I currently work remotely with a Canadian team at OnXpress, building web apps for railway infrastructure projects in Ontario. I like code that the next person can pick up easily, which is why I pushed for unit tests and code reviews on my team. I started out as a product designer, so I am comfortable working straight from Figma and talking things through with designers.

EXPERIENCE

MERN Stack Developer, OnXpress Transportation Partners (Remote, Canada) Feb 2024 – Present

- Build and maintain features in React, Next.js and TypeScript across 3 production apps used for Ontario's railway modernization work.
- Created a shared component library on top of Material UI and Ant Design. It became the team's default UI kit and cut the time to build new screens by about 30%.
- Wrote and connected 15+ REST endpoints in Node.js and Express, and set a common error format so frontend and backend handle failures the same way.
- Started unit testing with Jest and a regular code review process; production bugs dropped by 25%.
- Set up CI/CD pipelines and Docker-based deployments on AWS, so releases no longer depend on manual steps.
- Organize state with Redux for dashboards that handle large amounts of project data.

Frontend Developer, Miqsol Pvt. Ltd. (Lahore, Pakistan) Jan 2023 – Jan 2024

- Built the frontend of Eitrade, an import/export logistics platform, from scratch in React.
- Turned designs into responsive interfaces with Tailwind CSS and Bootstrap for 4+ client products.
- Found and fixed slow pages in existing React apps, improving load times.
- Worked in Agile sprints and turned usability feedback from product managers into feature changes.

Product Designer, Miqsol Pvt. Ltd. (Lahore, Pakistan) Jun 2022 – Jan 2023

- Designed screens, visual assets and branding for 5+ early-stage products, then worked with developers to get them built.

PROJECTS

Eshop-MV: Multi-vendor e-commerce platform React, Node.js, MongoDB, Redux, Socket.io

An online marketplace where many sellers run their own shops and customers buy from all of them in one cart. I built the whole stack, from the MongoDB schema and Express APIs to the React storefront and dashboards.

- Separate dashboards for customers, sellers and admins, protected with JWT login and role-based access.
- Live chat and order notifications over Socket.io, plus coupons, order tracking and email verification. Lighthouse score 95+.

LearnSphere: Online learning platform React, Node.js, MongoDB, Stripe

A course platform where students find, buy and watch video courses, and admins manage courses, users and orders. Payments run through Stripe, and lessons are grouped into sections for easy streaming.

- Email activation, JWT auth and Google/GitHub login; Q&A threads and reviews on every course; admin panel with role-based access.

Estate Hub: Real estate listing platform React, Node.js, MongoDB, Firebase

A property site where owners post homes for rent or sale and visitors search by type, price, amenities and offers. Owners can only edit or delete their own listings, and buyers contact them from the listing page.

- Google sign-in with Firebase, sessions in HTTP-only cookies, up to 6 photos per listing on Cloudinary, and Redux Toolkit for state.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend: React, Next.js, Redux Toolkit, Tailwind CSS, Material UI, Ant Design, shadcn/ui, Bootstrap
Backend: Node.js, Express, REST APIs, MongoDB, Mongoose, MySQL, Socket.io, JWT/OAuth
Tools: AWS, Docker, CI/CD, GitHub Actions, Vercel, Git, Jest, Figma, Agile/Scrum
Problem solving: 230+ problems solved on LeetCode

EDUCATION

BS Software Engineering, Virtual University of Pakistan Nov 2021 – Feb 2026
